

# **Groundwater protection and conservation**

## **Actions in the Júcar River Basin Authority**

Maria Serneguet

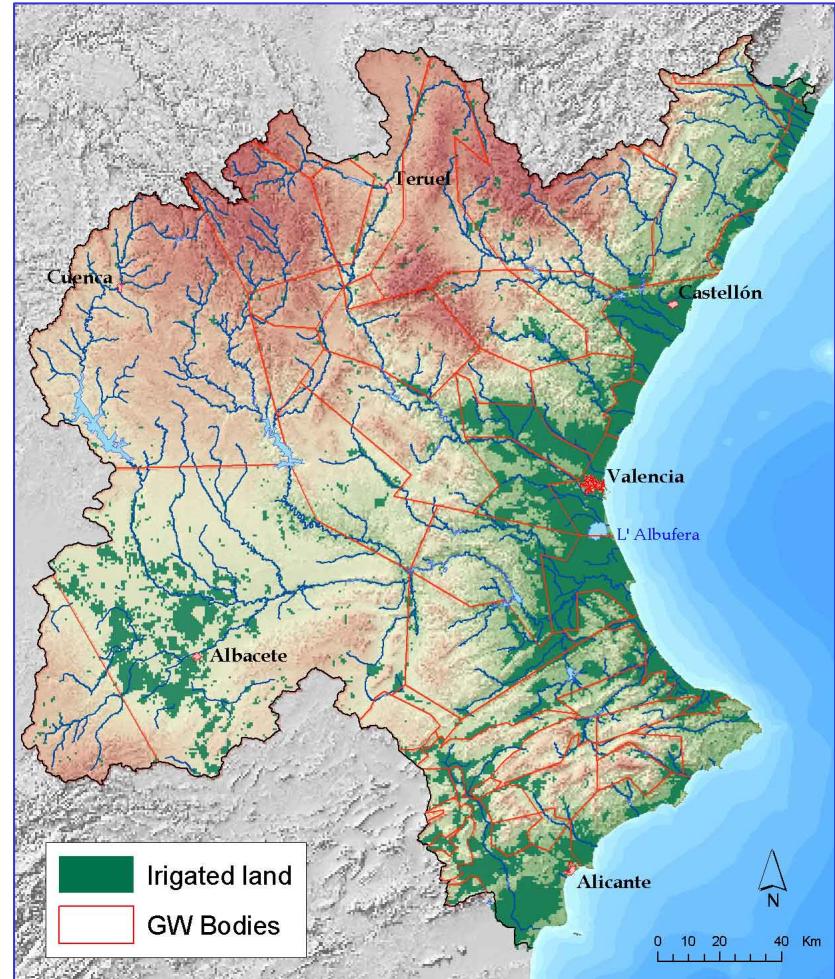

Mediterranean Network of Basin Organisations

Lisbon 20th October 2007

# JRBA Geographical Area

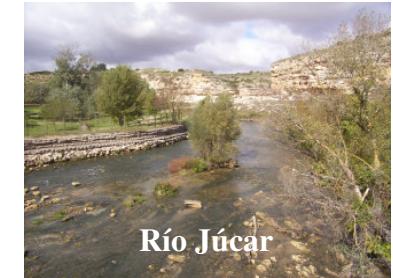

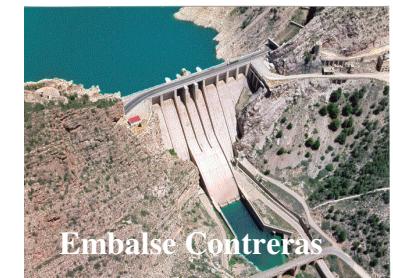

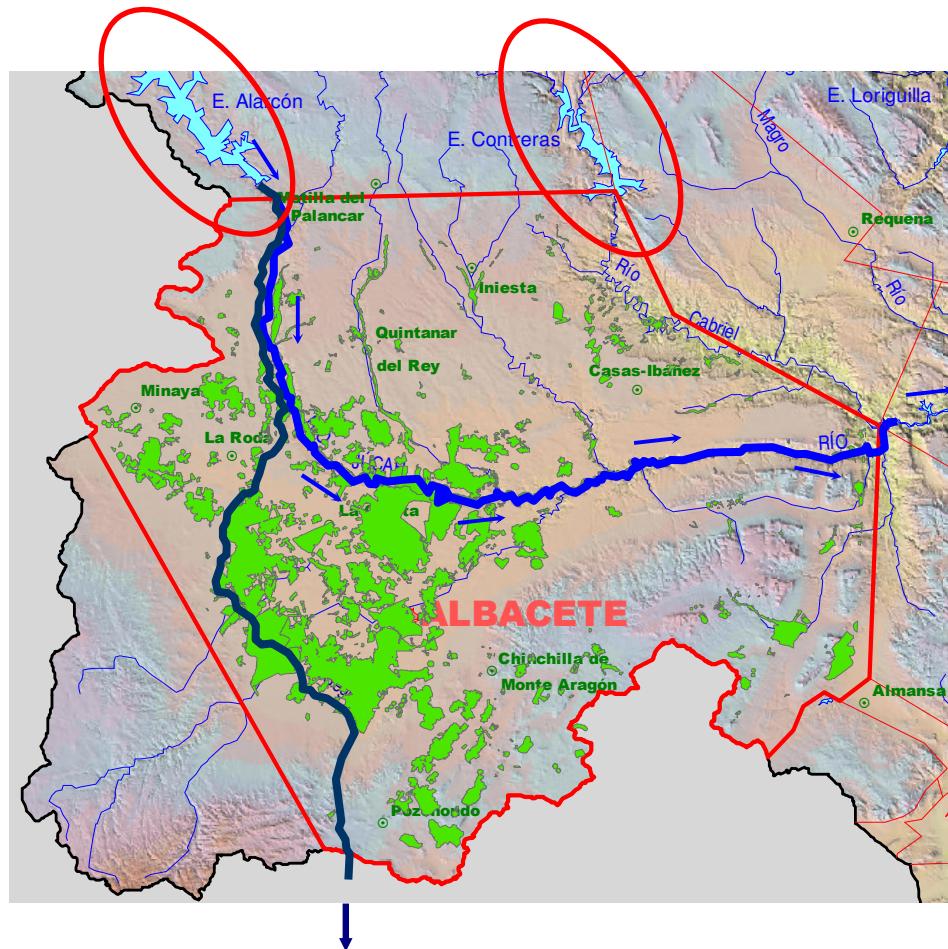

<b>Area (km<sup>2</sup>)</b>	<b>43 000</b>
<b>Population (inhabitants)</b>	<b>4 360 000</b>
<b>Equivalent population due to tourism (inhabitants)</b>	<b>1 400 000</b>
<b>Irrigated land (ha)</b>	<b>370 000</b>
<b>Water demand (hm<sup>3</sup>/year)</b>	<b>3 600</b>
<b>Water resources (hm<sup>3</sup>/year)</b>	<b>3 300</b>
<b>Origin of water resources</b>	<b>Surface water(25%) Groundwater(75%)</b>

# **Mancha Oriental Aquifer**

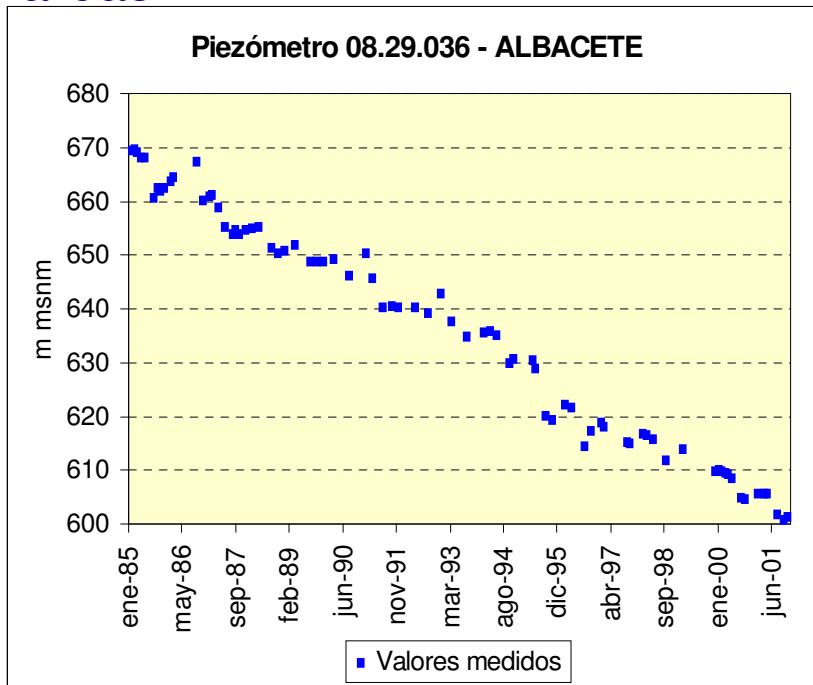

# Additional Characterisation: the example of La Mancha Oriental Aquifer

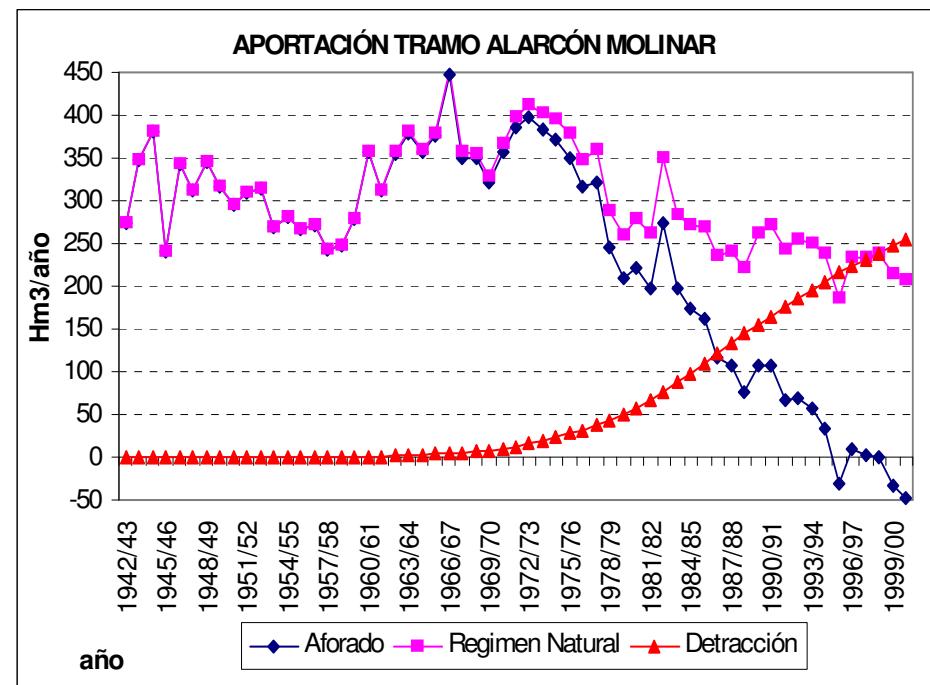

# Description of the study: Problematic

✓ Extractions are concentrated in certain areas, and their remarkable magnitude fundamentally affects the system in these two aspects:

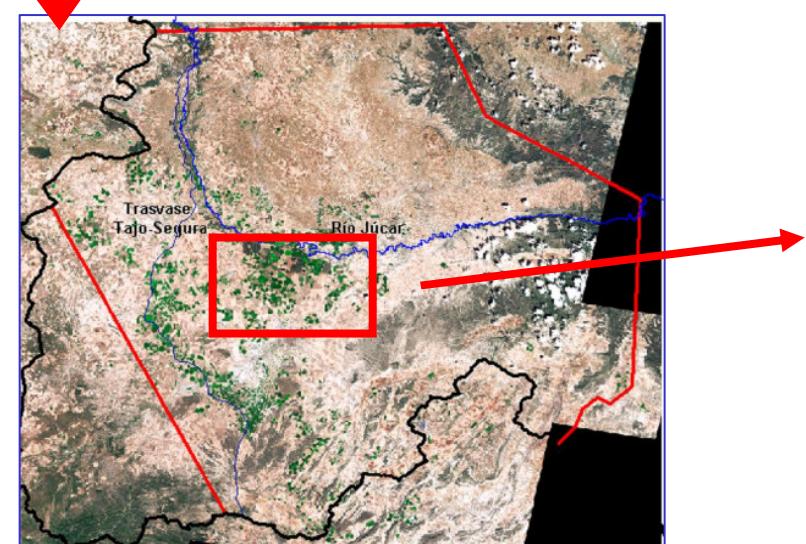

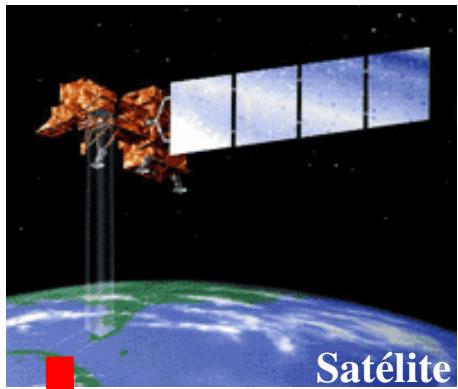

↳ Decreases in piezometric level, very significant in some areas

↳ Reduction of total discharge to the river Júcar

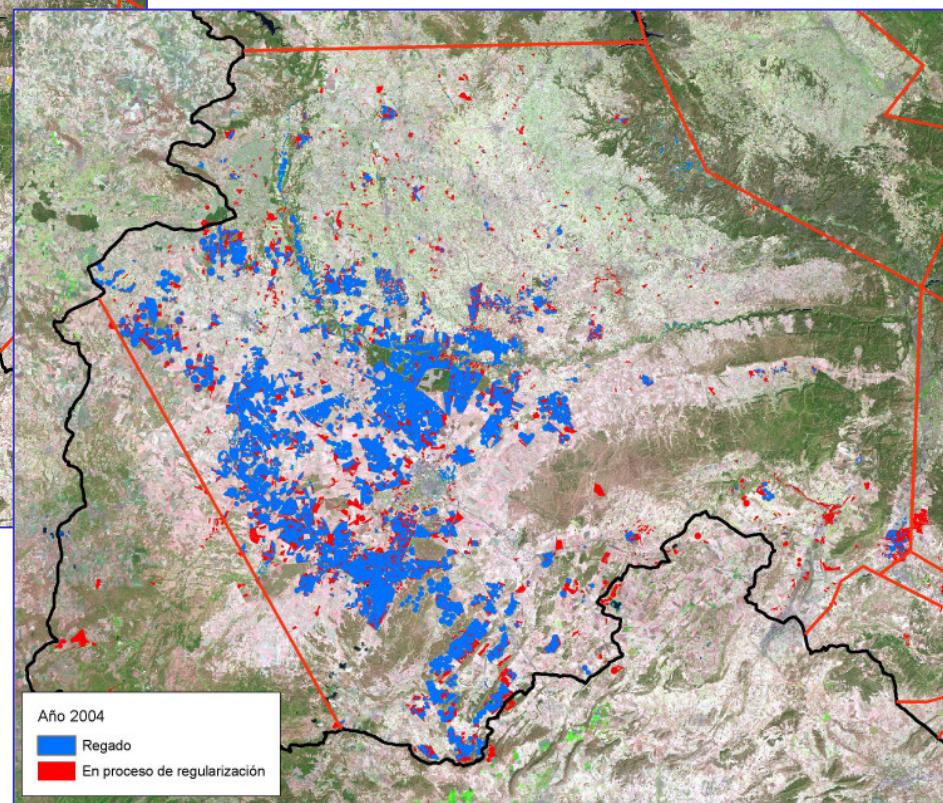

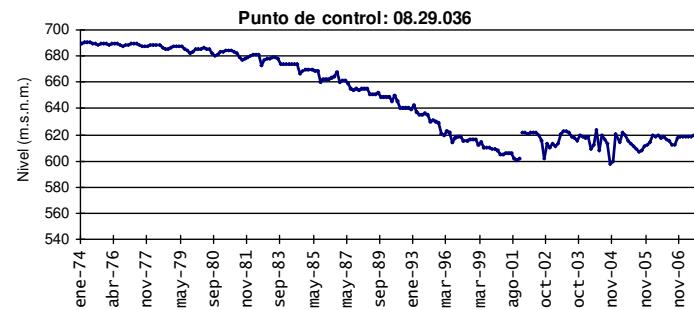

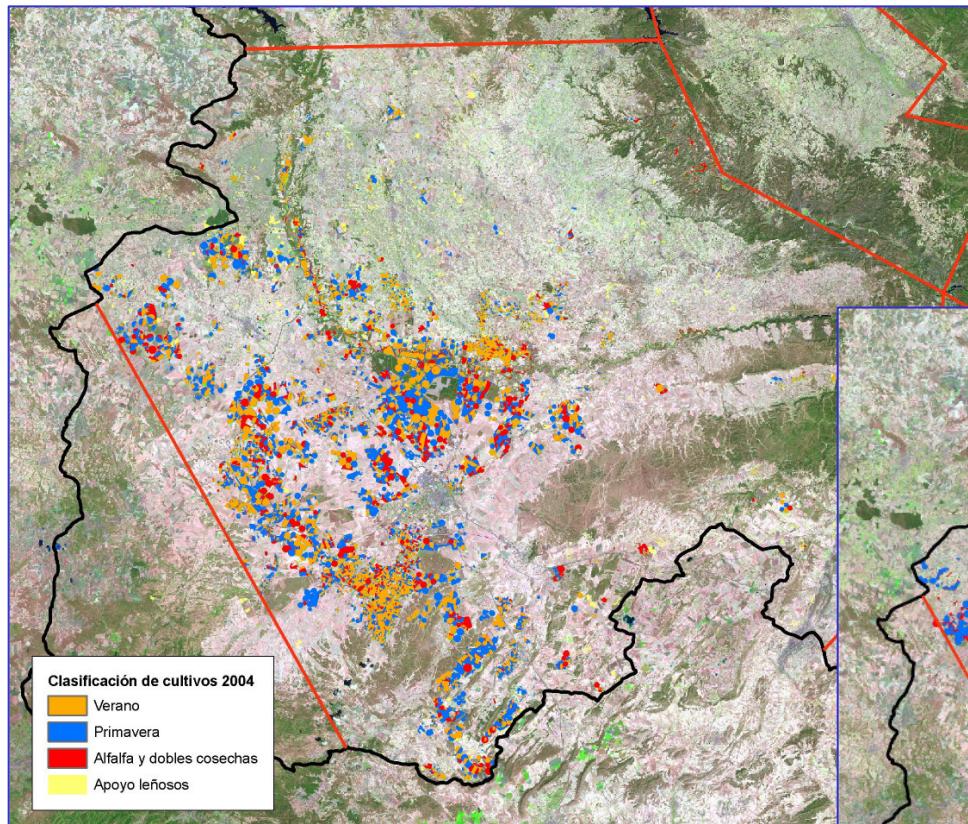

# Extraction Follow-up

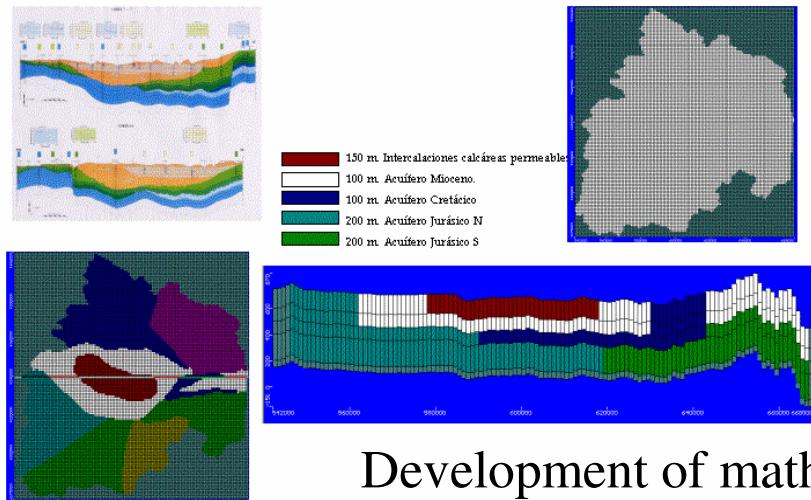

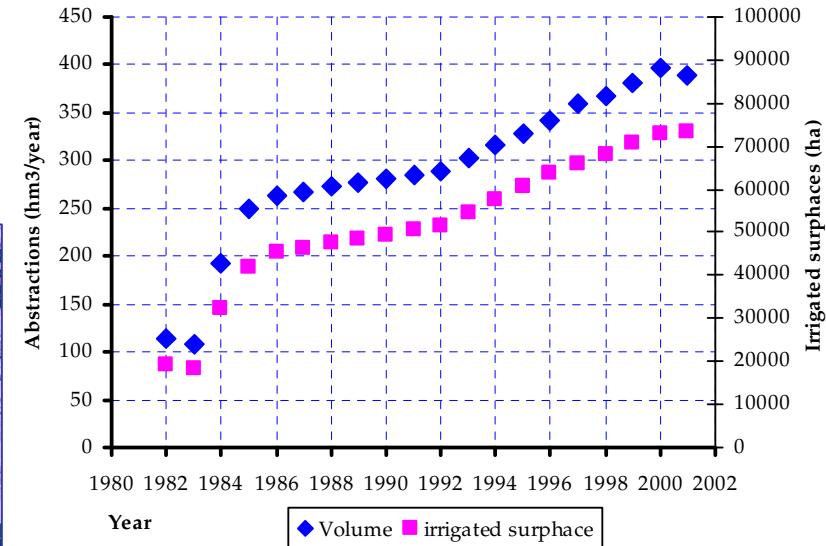

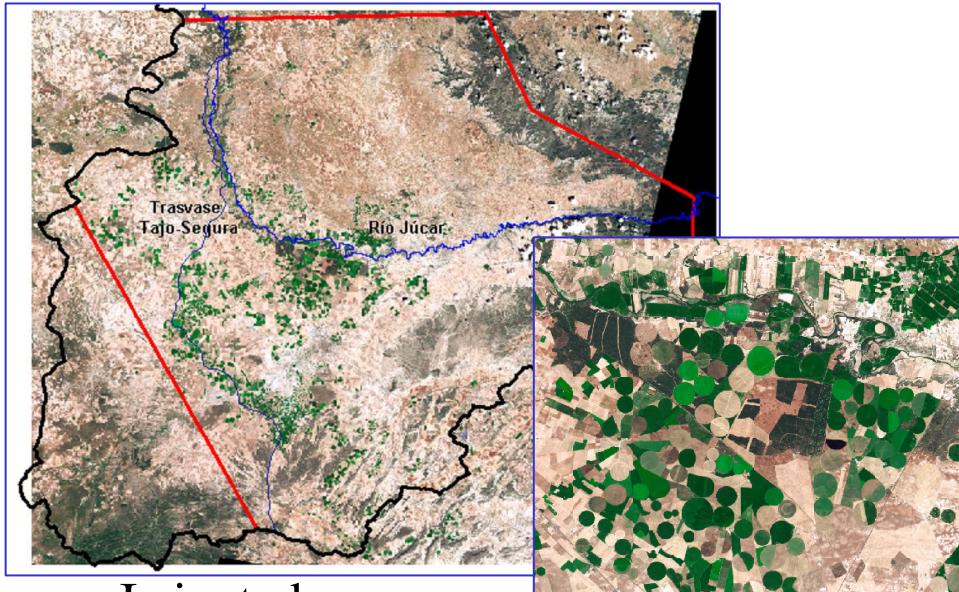

Use of teledetection (satellite images since 1982) and digital land registry for the follow-up of the irrigated surface.

# Crop classification (year 2004)

# Further characterisation: Case study of Mancha Oriental Aquifer

Development of mathematical models

# Use of mathematical model

## MODFLOW MODEL

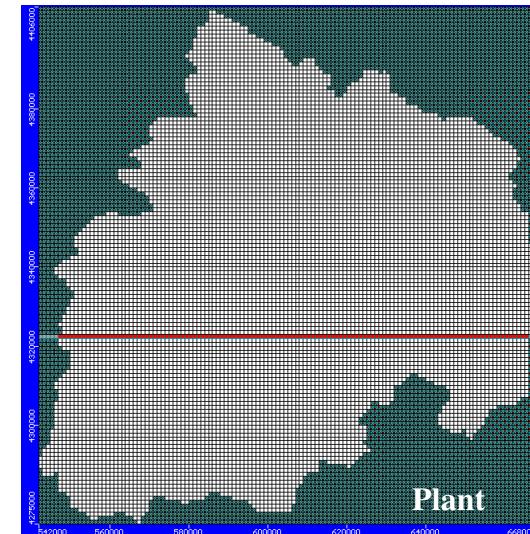

McDonald, M.G., and Harbaugh, A.W., 1988

### Character

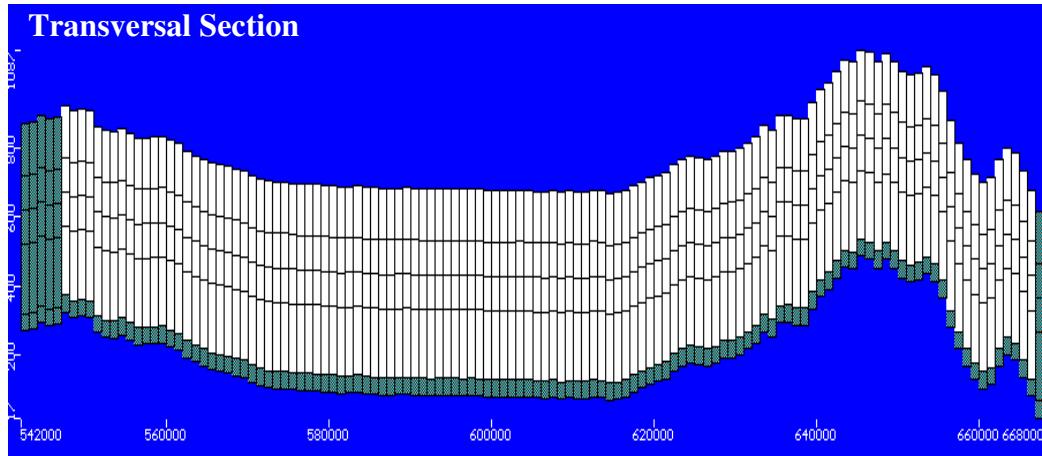

- 131 rows x 126 columns
- Cells 1x1 km<sup>2</sup>
- Multi-layer model (4)
- Calibration in Stationary and Transitory regime

### Objectives

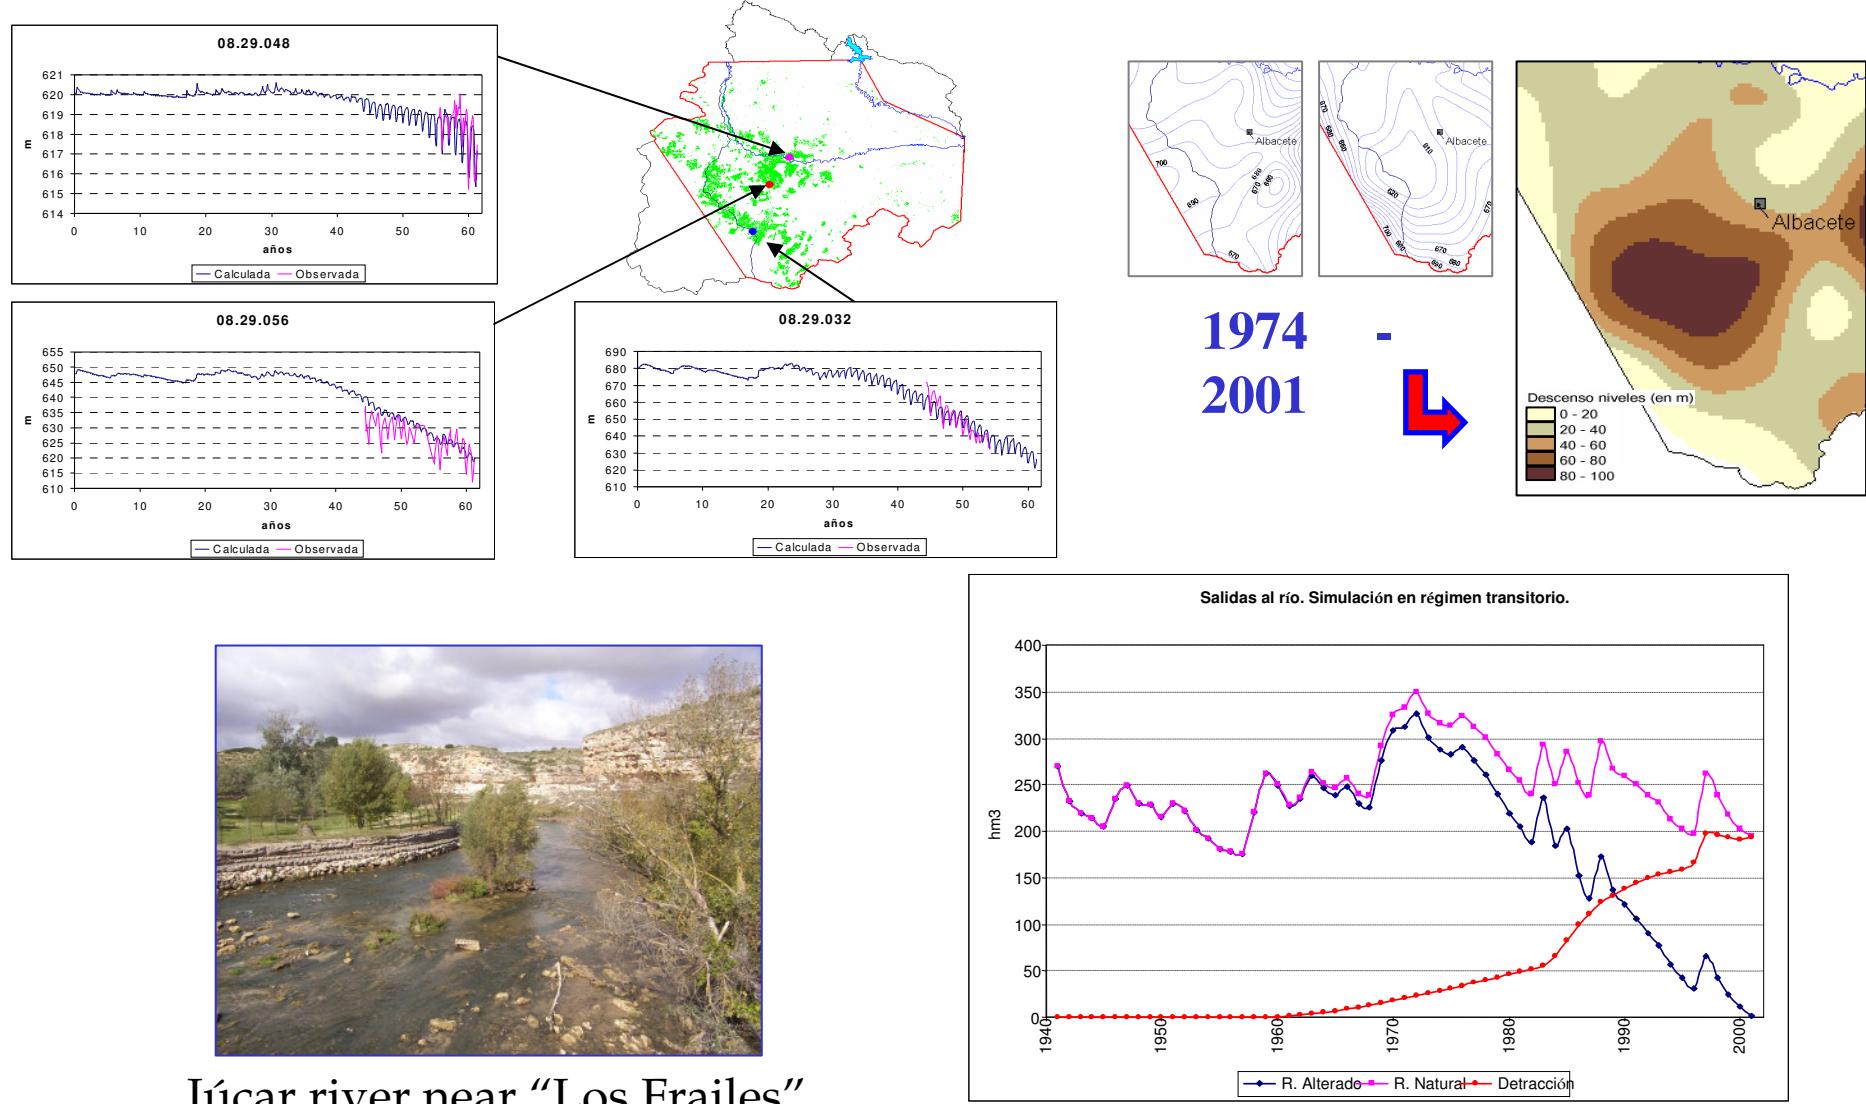

- Simulation non-altered status
- Simulation evolution of piezometric surface
- Future scenarios analysis

Transversal Section

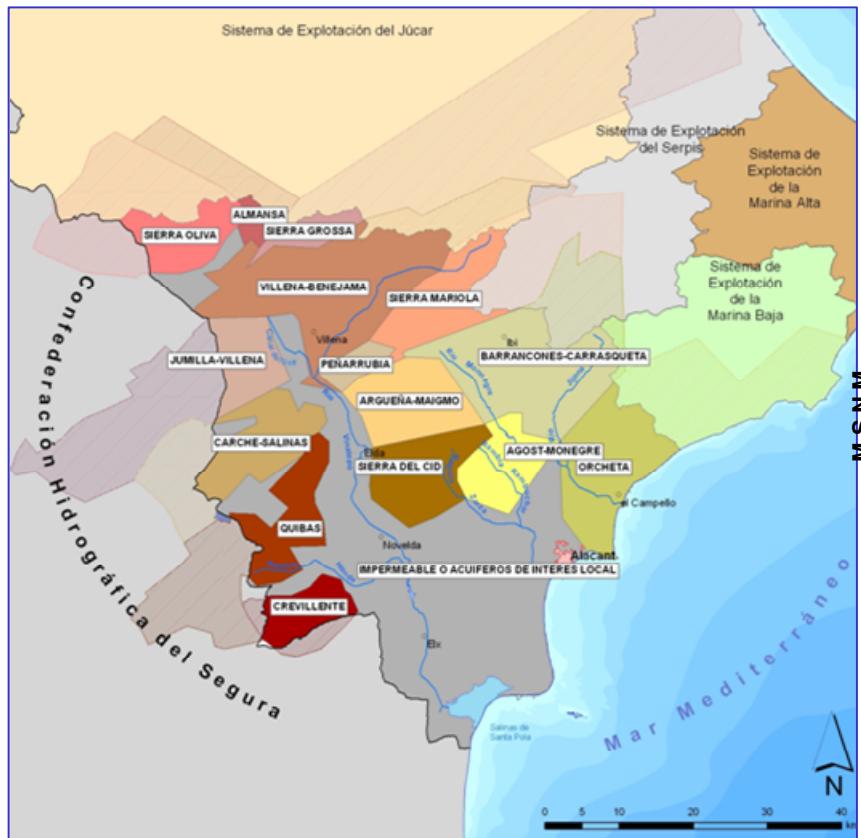

# Modelling Mancha Oriental aquifer

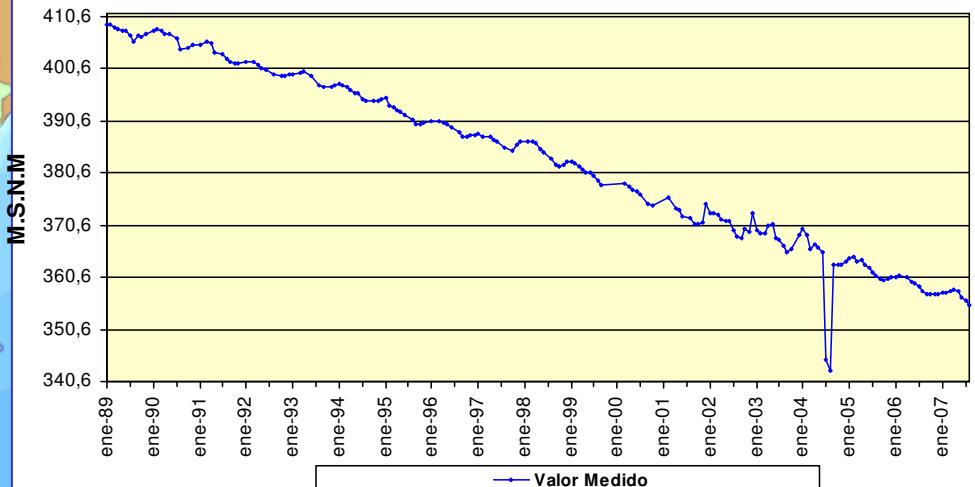

# **Vinalopó Aquifers**

# HGU's of the exploitation system Vinalopó-Alacantí

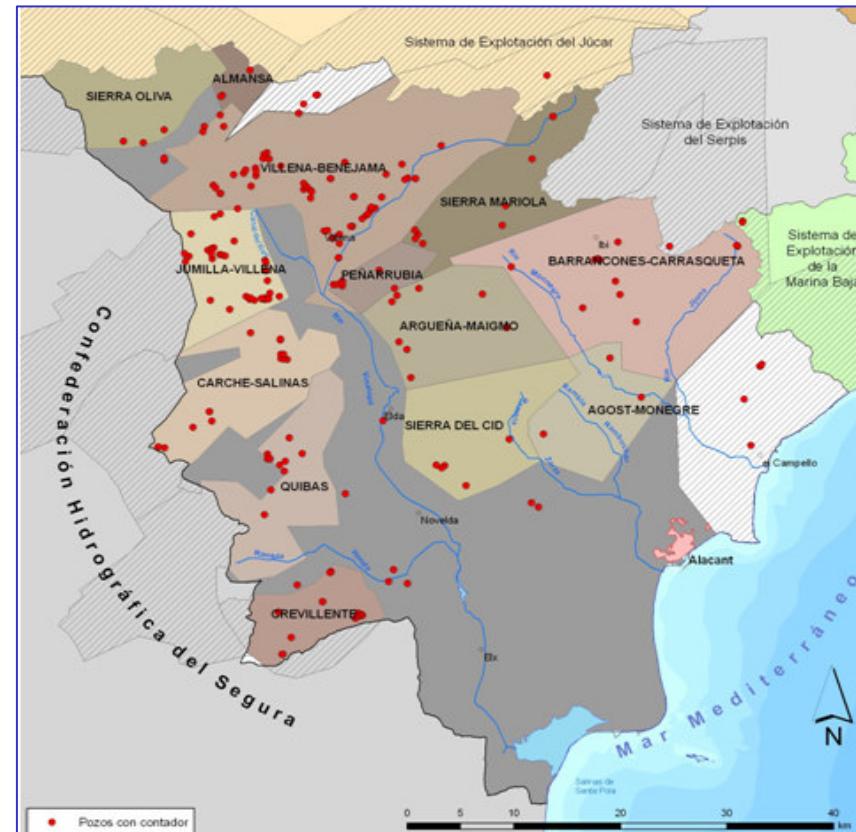

Piezómetro 08.35.002 - Los Gazpachos (Villena)

## Hydrogeological Units

# Actions in the exploitation system Vinalopó-Alacantí

75% of the pumping is currently controlled

Location of meters
