How water affects you, plants and animals.

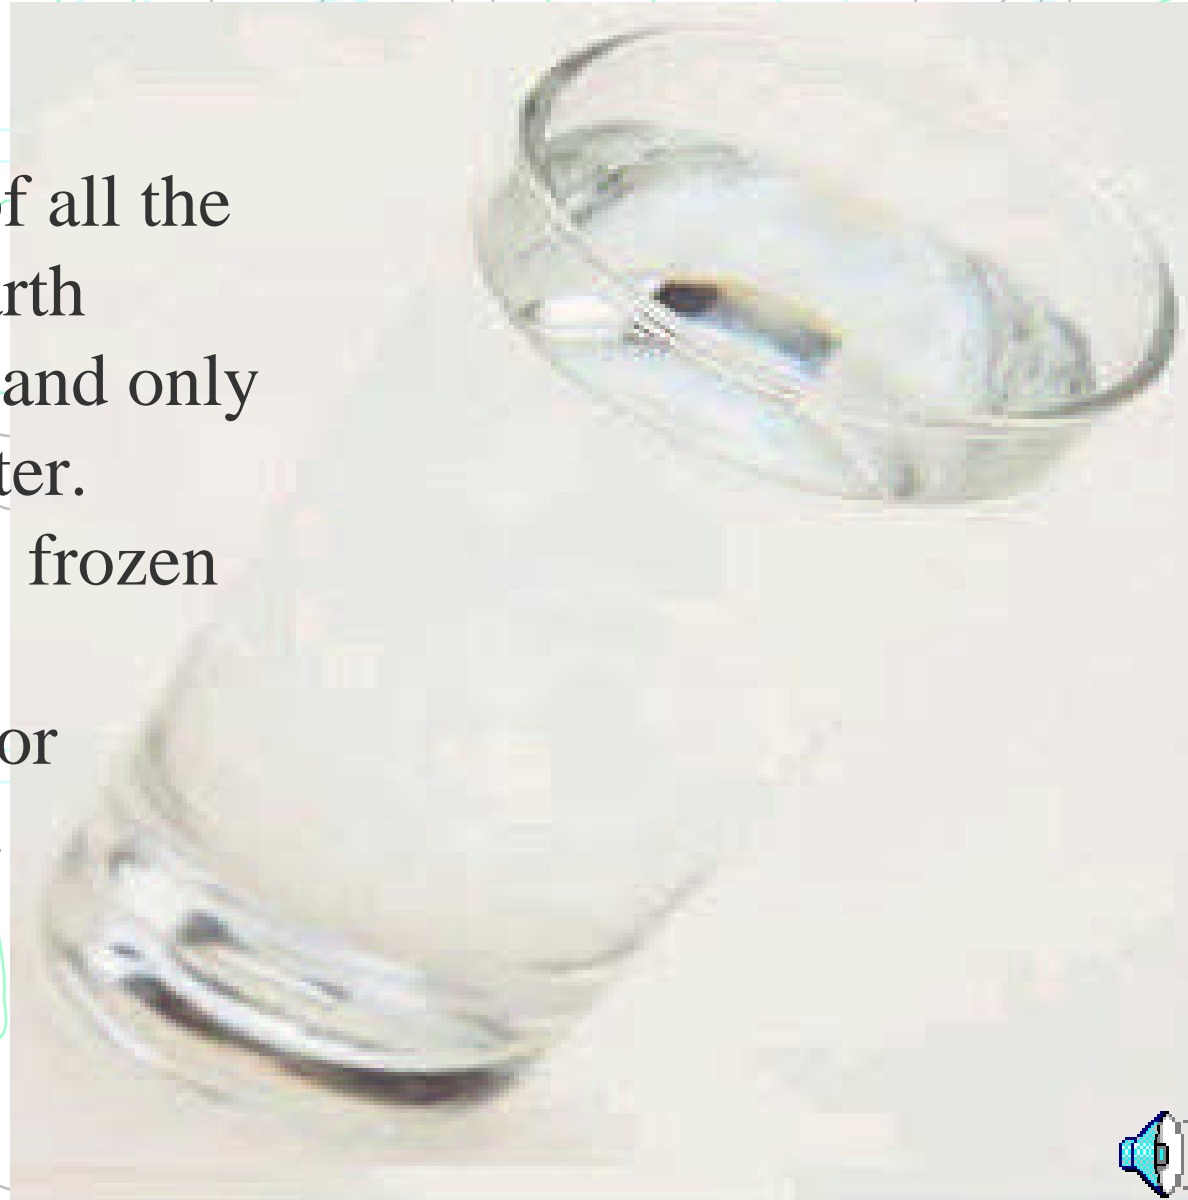

A hand holding a pencil, positioned at the top left of the page, ready to write.

Water is essential to life on earth.

A hand holding a scroll with text and a background of scribbles. The hand is pink and purple, holding a black scroll. The background is white with green and blue scribbles. The text is in black, serif font.

There is 97% of all the
water on the earth
Is in the ocean and only
3% is fresh water.
That leaves 2% frozen
and out of that
Less than 1% for
drinking water.

The Three forms of Water.

- **Solids:** When water becomes very cold and freezes it will change from a liquid to a solid. It has a definite form and shape.
- **Liquids:** When water takes the shape of its container it is in a liquid form.
- **Gases:** When water is seen in a vapor form and has no definite size or shape it is in a gas form.

Solids

- We see it
- In ice

And in frost

And in frost
